What is the Test case? (Testcase vs Test Scenarios

Test Case	Test Scenario
It is an documentation with step by step instructions to execute various actions under defined conditions	It is a one line statement describing the executing procedure for a Test case. It is the action the user is going to actually perform
Test cases are derived from Test Scenario	Test Scenarios are basically derived from the client requirement like CRS or SRS.
Test case have in depth information of the actions that have to be performed	Test Scenarios present an overview of the action to be performed

What are the different fields?

- Scenario TID
 - ScenarioDescription
 - Test Case ID
 - Pre Condition
 - Steps to Execute
 - Post Condition
 - Expected Result
 - Actual Result
 - Status
 - Priority
 - Executed By QA Name
 - Created By QA Name
 - Comments

Best Practices to write Test case

- Steps to execute should be clear
- Add Test data in pre condition
- Make sure you get your Test cases reviewed
- Write better testcases for multiple time , same time case
- Improper test cases leads to bugs so make sure you add
- Test cases gives you clarity what is covered and what is not
- Make test cases reusable.
- Specify expected results and assumptions
