

Fixing a bug in production.

How Did You Miss That Bug?

Fixing Cost in Production

Top reasons why you miss bugs

You didn't test it

You didn't cover all corner cases

You Assumed the Requirements

Due to Time pressure

You saw the problem but you didn't report it.

How to Prevent it?

Document Everything

Question everything

Ask about RISK

Worst case scenario Question

RCA prepared or Template trick

Due to a lack of communication,
time constraints

A lack of test case review, a lack
of skill set.

the application's complexity

QA's absence from sprint
meetings

Other Important Reasons
