7 Deep Lessons on Test Automation That Nobody is Telling you.

Before we Start
- API Testing with POSTMAN
- SDET Blueprint v1.0 Series
- Rest Assured 30 Day Challenge
- Selenium 30 Day Challenge — https://sdet.live/7ChH
  - https://sdet.live/ytp
- Become Part of SDET Community — **https://t.me/thetestingacademy** [↗]

Don't Try to Automate everthing
- What is Automate, What not to Automate

Make your Scripts Atomic in nature
- **Create your data** — Perform Task — Delete it

Avoid Automating feature which are very flaky
- , You know they will fail every time they run

Discuss Automation Strategies
- **How, Why and What**
- Peer Review Your Strategies

Stakeholder will ask for 100% automation
- Instead prioritize your Test scripts OVER 100% automation
  - 100% automation is myth

Know your feature well
- If you know it, you will automate it properly

Don't just add Scripts
- Focus on coverage
- missing touch points of app

Why Automated Tests Don't Find Bugs
- Regression bugs
- Make your system reliable
- Make sure regression works
- **https://dorothygraham.blogspot.com/2010/05/automated-tests-should-find-bugs-no.html** [↗]
  - Bugs are found by tests, not by automation.
